

# SUSTAINABILITY

## pre convention meeting

19th OCTOBER 2011 MADRID, SPAIN

10:30-12:30

Círculo de Bellas Artes  
C/ Alcalá 42

PLDA Greenpages  
<http://greenpages.pld-a.org>

### daylight

The natural aspect of light is often the least consciously noticeable by people, although it has a strong impact on the relationship between humans and space. Daylight strategies should carefully considered as part of the basic concepts of the project

### well being

As lighting designers we must recognize lighting's potential contribution to influence people life and working from an inspiration in natural light, most of all from its mutability, to interact positively with humans

### new technologies

Lighting designers can work alongside manufacturers to help developing new technologies application to control light in quantity and quality, going toward the goal to integrate natural light and achieve the right light at the right place at the right time.

### awareness

Social sustainable consciousness need to be associated to an awareness process on lighting in the most original of its term: giving light the right function and re-equilibrate its relation with darkness.

### regulations

Delineate an International legislation that provides environmental guidelines concerning the use of new technologies in sustainable design, but also a series of prescriptions related to sensible use of light in order to decrease light pollution level.
